

“It gives me options
and choices”

Lee, New Zealand

With 100% No Touch Protection,
whatever you touch
won't touch VaPro catheters.

VaProTM

No Touch Intermittent Catheter

Continence Care

VaPro catheters provide 100% No Touch Protection with a protective tip and sleeve

VaPro catheters are hygienic by design to help protect you from germs throughout the entire catheterisation process.

Protective tip

- helps shield the sterile catheter during insertion from bacteria located within the first 15 mm of the distal urethra
- helps reduce the risk of carrying bacteria into the urinary tract

Protective sleeve

- allows for catheter to be gripped anywhere
- provides a barrier to the catheter to help keep germs away

The protective tip is designed for male and female use

The protective tip works to greatly reduce the risk of bacteria being carried into the urinary tract during the insertion process. This illustration demonstrates its effectiveness using the male anatomy.

The catheter is advanced into the protective tip, and then the protective tip is inserted into the urethra.

The protective tip helps prevent the catheter from coming into contact with the bacteria that are predominantly in the first 15 mm of the urethra.

The protective tip helps protect the catheter from becoming contaminated.

Watch the Contamination and Prevention in IC Treatment Video and learn more about Hollister's 100% No Touch protection and how they are designed to help protect you from germs.

VaPro catheters aid in the **drainage of mucous and sediment**¹

93%

of VaPro catheters users feel protected against infections²

94%

of patients were satisfied with their overall experience with VaPro catheters³

Ultrasonically rounded eyelets for a smoother experience

VaPro catheters:

- Are designed with smooth rounded eyelets to **enhance user comfort during insertion and withdrawal** and minimise urethral abrasion during passage⁴
- Are designed not only to facilitate **complete emptying of the bladder**, they also aid in **drainage of mucous and sediment**, which may be associated with bladder stones and urinary tract infections¹

VaPro catheters offer **superior*** protection**

Zero

VaPro catheters are the only range of catheters to reduce microbial contamination** to effectively zero¹

50%

of Intermittent Catheter users reported less frequent UTIs after changing to VaPro catheters²

An independent laboratory investigated the protective effects of VaPro catheters and how they compare with intermittent catheters from other manufacturers.

Learn the results.

Easy to use

The combination of protective tip and sleeve creates a no touch system that is easy to use
 Ready to use right out of the package with no extra steps required

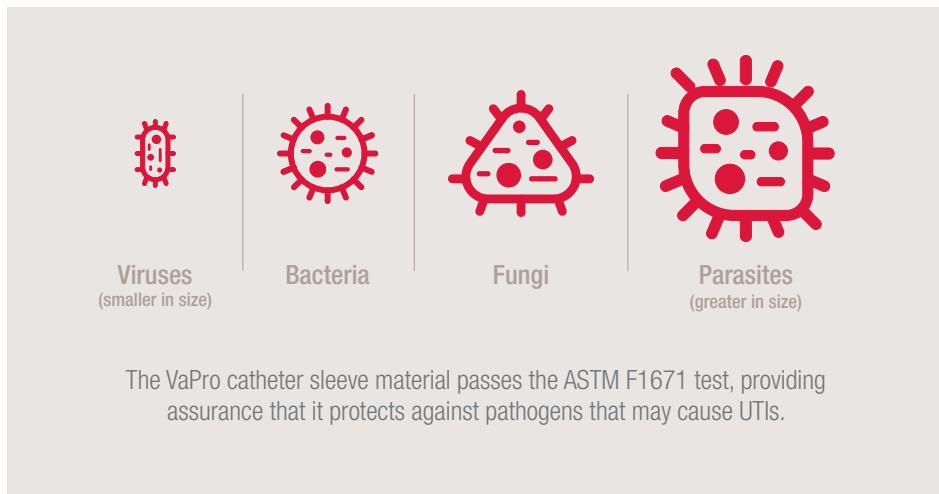

Prior to use, be sure to read the Instructions for Use for information regarding Intended Use, Contraindications, Warnings, Precautions, and Instructions.

Proven to prevent the transmission of pathogens that may cause UTIs

The American Society for Testing and Materials (ASTM) is an international standards organisation that develops and publishes voluntary consensus technical standards for a wide range of materials. ASTM has also conducted and published approximately 6000 test methods to date.

ASTM F1671 is a pass or fail test designed to determine if protective materials prevent the transmission of blood-borne pathogens.

VaPro catheter sleeve material was tested. In the test, one side of the sleeve material was exposed to a solution containing a type of virus called bacteriophage. Results showed that the viruses did not pass through the sleeve material.¹

Go to Hollister.com.au or Hollister.co.nz to learn more about clinical and laboratory evidence that demonstrates the benefits of VaPro catheters' protective tip and sleeve.

Why settle for anything less?
